Best-Execution Review

2024-04-01 to 2024-06-14 · Demo Client

Prepared for	Demo Client
Engagement	DEMO-0008
Report date	11 November 2026
Version	1.0
Prepared by	ProQuant Analytics · info@proquantanalytics.com
Run ID	tc_20261111T142137Z_e0c00a

Executive summary

Demonstration. Synthetic manager, brokers and orders generated for illustration.

This document records the monitoring of execution quality of Demo Client for 2024-04-01 to 2024-06-14 against the best-execution policy. It covers 1,139 orders; 32 could not be measured and are listed. It is prepared for the head of trading and the compliance officer; it documents what the data shows and what has to be explained. It is not a regulatory opinion.

Orders with at least one exception: 444 of 1,139 (39.0%)

An exception is a reason to ask for an explanation, not proof of a breach. Each one is in the order review sheet with columns for the trader's explanation and the compliance review.

Policy limits

Rule	Limit
Fill beyond the order's limit price	tolerance 0 bps
Slippage against the arrival price	60 / 50 / 40 bps (low / normal / high urgency)
Participation in the market volume of the execution interval	50%
Time from decision to arrival at the desk	20 minutes
Commissions and fees	2 bps of notional
Share of notional with one broker	40%
Decision price recorded	required

Source: config.yaml (policy)

Exceptions by rule

Rule	Orders	Share of orders	Share of notional	Most exceptions
limit_breach	25	2.2%	2.1%	Gamma Capital
slippage	83	7.3%	14.0%	Gamma Capital
participation	171	15.0%	28.4%	Delta Direct
delay	68	6.0%	8.4%	Alpha Securities
commission	235	20.6%	22.6%	Gamma Capital
decision_price	15	1.3%	1.2%	Alpha Securities

Source: tables/policy_summary.csv

Methodology

Each limit is tested on every order from the fills and the market bars. Slippage is measured against the arrival price and compared with the limit for the order's urgency; participation is the executed quantity over the market volume of the execution interval; delay is the time between the decision and the arrival at the desk; a limit breach is a fill at a price worse than the order's limit price; commissions are commissions and fees over the notional. The limits are those agreed at kickoff and recorded in the configuration of the run.

Results

1. Broker selection and concentration

The largest broker is Alpha Securities with 39% of the notional (limit 40%).

Broker	Orders	Notional	Shortfall	vs arrival	vs VWAP	Explicit	Reversion	Model	Alpha	Low	High	Result
Gamma Capital	235	22%	34.9	33.2	+25.0	2.5	15.7	16.0	+17.2	9.3	25.6	worse than the model
Delta Direct	159	13%	21.0	19.5	+20.6	0.8	18.8	14.9	+4.6	2.1	7.0	worse than the model
Alpha Securities	418	39%	19.0	13.7	+14.7	1.6	19.2	16.2	-2.5	-8.4	2.8	not significant
Beta Markets	327	26%	17.5	10.3	+14.8	1.3	15.0	15.8	-5.6	-11.6	0.4	not significant

6. Review and sign-off

Exceptions are reviewed in the order review sheet (columns: the trader's explanation, the compliance review, the status). The review is complete when no exception is Open.

Head of trading
Name, signature, date

Compliance officer
Name, signature, date

Limitations and assumptions

- The price data is five-minute bars, so very small differences here mean little.
- The policy limits are internal thresholds agreed at kickoff; they are not regulatory limits.
- An exception can have a good reason (a deliberate decision to trade urgently, a thin market); the review exists to record it.
